SUMMARY

Development intern on the Innovation team at Asten AVMB since Oct/2026. I am also a full-stack developer at CentralEng, an HVAC engineering company, part time and on demand: I built a technical training LMS on my own, now in validation with employees, and gathered requirements for and modeled the PMOC maintenance management system. I study Information Systems at AMF.

HOW I WORK

I write a short spec with acceptance criteria before the code, and the test before the implementation (TDD). Each change goes through a PR, with review and CI running tests, type checks and build. For AI features, I keep an evaluation set out of prompt tuning and run it once, at the end.

EXPERIENCE

Development intern, Innovation team, Asten AVMB — Oct/2026 – present

- I took over the dash-asten project, a dashboard for the company's internal meetings, shown on a TV, and take part in other team projects.
- The dashboard shows KPIs by status, overdue SLA and tickets open for 60 days or more. It imports each month's spreadsheets, stores versioned loads and is in production in management meetings.
- Spec-driven development with AI agents and human approval before merge; a PRD with more than 100 decisions.
- React, TypeScript, Vite, Tailwind CSS, Vercel Functions and PostgreSQL with Prisma; tests with Vitest and Playwright.

Full-stack developer and IT analyst, CentralEng, HVAC engineering — May/2026 – present, on demand

- I built the technical training LMS on my own, from architecture to tests, with a PRD (20 requirements), ADRs and a 36-item backlog. It is in validation with employees.
- I gathered requirements for and modeled the PMOC maintenance management system.
- I set up continuous integration with lint and build on every push.
- I integrate the internal systems and automate tasks the team used to do by hand.
- I look after the IT infrastructure, the databases and user support.

Co-founder, YourMentor — Jun/2026 – present

- A platform that connects mentors with people who want to learn. I built the back end in Python, FastAPI and PostgreSQL and defined the architecture, the data model and the monetization.

Scholarship teacher, JET Project (Youth and Technology), AMF — Feb/2026 – Oct/2026

- I taught Python, HTML, CSS, Arduino and responsible use of AI to more than 100 students from 4 public schools. After the first semester I took on 2 more schools, on the project coordination's recommendation.
- I gave an 80-minute workshop on AI for AMF teachers.

Administrative assistant, CentralEng, HVAC engineering — Oct/2025 – Apr/2026

- I organized project documentation, invoices and financial controls. I automated the department's routines and was promoted to developer in 7 months.

PROJECTS

leadgate github.com/gomesbeduardo/leadgate
AI lead triage for an HVAC company. It chats with the customer until it has the data sales needs, then sends a validated JSON. The code checks each model answer (Zod and fixed rules) before moving on. About 570 automated tests and a held-out evaluation set, run once. TypeScript, Node.js, Docker, n8n.

Technical training LMS github.com/gomesbeduardo/plataforma-LMS-corp
Course platform with progress per employee, assessments and PDF certificates. The private version is in validation with employees at CentralEng. Next.js, TypeScript, Prisma, PostgreSQL, Docker.

InfoHub InovAMF github.com/gomesbeduardo/infohub-inovamf
The entrepreneur's journey from InfoHub (AMF) to InovAMF. Systems Architecture course project, built as a pair. Next.js, TypeScript, Prisma, PostgreSQL.

ToPark
Founder, from Apr/2024 to Oct/2025. A startup for booking parking spots in advance, selected for the first cohort of the InovAMF incubator. I built the Python back end, the business model and the recruitment of partner parking lots. Python.

AWARDS

2nd place, Information Systems Ideathon at AMF 2026 2026

1st place, Coderace 2026 (AMF) Jun/2026
AgroPlanner, an AI decision-support platform, built as a team: 15 user interviews before any code and delivery within a 10-hour hackathon.

1st place, 1st Information Systems Ideathon at AMF Oct/2025
Team Mentor.Me.

VOLUNTEERING

Vice-president of the Information Systems Student Council. Council secretary since Mar/2025. present

Financial assistant on the Code Race 2026 organizing team. I work only on finances, with no role in judging the teams. since Mar/2026

Organizing committee of the 9th Code Race. 28 hours. 2025

Organizing committee of the Information Systems Academic Week. 40 hours. 2025

EDUCATION

B.Sc. in Information Systems, Antonio Meneghetti Faculdade (AMF) Feb/2024 – Dec/2028 (expected)

CERTIFICATIONS

Python Fundamentals (Rocketseat) · Git and GitHub Basics (Rocketseat) · NLW Pocket JavaScript (Rocketseat) · Cria Summit 2025 (8 hours)

STACK

Applied AI: Claude Code, Codex; spec-driven development with agents, agent review and human approval before merge

Languages: TypeScript, JavaScript, Python, SQL

Front end: React, Next.js, Vite, Tailwind CSS, shadcn/ui, Recharts

Back end and data: Node.js, Express, Python, FastAPI, Prisma, PostgreSQL, Neon, Supabase, Vercel Functions, SheetJS

Quality and operations: Vitest, Playwright, GitHub Actions, GitLab, Docker, Portainer, Linux, Git

Automation and integrations: n8n, REST APIs; an RPA integration that receives JSON data from an external system and sends WhatsApp and email notifications, with Python validation scripts (RestrictedPython, sandboxed)

LANGUAGES

Portuguese (native) · English (advanced)
